[Program Name] – Master's Admissions

Subject: Letter of Recommendation for Mr. Rahul Mehta – MS in Computer Science

Dear Members of the Admissions Committee,

I am writing this to strongly recommend Rahul Mehta for your upcoming Master's program in Computer Science. I have known Rahul for three years as his academic advisor and course instructor at the Indian Institute of Technology Delhi. He is one of my top students.

I first taught Rahul in my Data Structures and Algorithms course and he ended up scoring the highest in the class (94/100). Rahul was not only good at solving problems. He was also able to explain how he thinks much more clearly. He was always one of my most active students who used to go beyond the syllabus. At times, he used to bring in research papers on his own and would connect theories to the problems of the real world.

Rahul worked with me as a research assistant on a natural language processing project for low-resource Indian languages in his last year. He also created a transformer-based text classification model. It scored an F1 of 0.87 on a standard benchmark and performed better than the previous baseline. His work was also included in a paper that we submitted to an internal conference. It is not common for me to see UG students handle open-ended research problems with that kind of skill and confidence.

Rahul is also a strong team player and naturally takes leadership roles in group projects. Because of this, both his classmates and faculty speak highly of him.

I am confident that Rahul has all the skills, mindset, and experience required to do well in a demanding master's program. He will be a real asset to your department. I recommend him without hesitation and am happy to answer any of your questions.

Sincerely,

Dr. Ananya Sharma

Associate Professor, Department of Computer Science
